## Application Compatibility Matrix

---

**Note:**

- On Cisco UC app versions we list the significant versions; including any SUs supported under that. For exact versions tested see the release notes for the given release. Specific notes are added if we there are issues with specific Cisco UC apps versions and VOSS-4-UC versions.
  - On the Cisco UC apps, any new provisioning settings for new features added in a SU will not be visible in VOSS-4-UC unless specific work was done to support them, since AXL API changes are not done in SU releases by Cisco. VOSS Release notes will indicate any SU specific features that have been explicitly supported,
  - If you need a version supported that is not indicated above as supported or planned, contact your VOSS team for further options and if support could be added.

## Supported Browsers

For this Release, testing was performed using the following browser versions.

Note that older versions of each browser may also be compatible.

OS Browser	Chrome	Edge	Firefox	IE	Safari
Windows 7	80	46	75	N/A	N/A
Windows 10 64 bit	80	46	75	11	N/A
Xubuntu 20.10	87	N/A	N/A	N/A	N/A
Ubuntu 21.04	92	N/A	90	N/A	N/A
Mac OS 11.1	92	N/A	90.0.2	N/A	14.0.2

Internet Explorer 10 and 11 running on Windows 7 require adjustments to the browser's SSL/TLS settings to work:

1. In the browser, choose **Tools > Internet Options**.
2. Click the **Advanced** tab.
3. Scroll to the **Security** heading.
  - For IE 10, locate and select the **Use TLS 1.0** check box, and clear the **Use SSL3** check box if selected.
  - For IE 11, locate and select the **Use TLS 1.0** and **Use TLS 1.2** check boxes.
4. Click **Apply**, then click **OK**.

If TLS1.2 does not work, select the **Use SSL3** and **Use TLS 1.2** check boxes on both IE 10 and IE 11.
